RESEARCH EXPERIENCES

- 2021 – Present [Nesterov Accelerated Shuffling Gradient Method for Convex Optimization](#)
Working under the supervision of Dr. Lam M. Nguyen and Prof. Katya Scheinberg
– Propose a new algorithm for the convex finite-sum problems, which integrates the traditional Nesterov's acceleration momentum with different shuffling sampling schemes.
– Prove an improved convergence rate in term of epochs, which is better than that of any other shuffling gradient methods in convex regime.
Published as a conference paper at ICML 2022
- 2020 – Present [Optimization for Queueing Models in Reinforcement Learning](#)
Working under the supervision of Prof. Katya Scheinberg and Dr. Lam M. Nguyen
– Investigate the optimization aspects of the queueing model as a Reinforcement Learning environment.
– Use the intrinsic properties of queueing network systems to optimize with probabilistic zeroth-order/first-order oracles
- 2020 – Present [New Perspective on the Global Convergence of Finite-Sum Optimization](#)
Working under the supervision of Dr. Lam M. Nguyen
– Present an alternative formulation for the finite-sum nonconvex optimization problems.
– Propose a novel framework that guarantees global convergence and exploits the structure of machine learning problems where the loss functions are convex.
- 2020 – 2021 [SMG: A Shuffling Gradient-Based Method with Momentum](#)
Working under the supervision of Dr. Lam M. Nguyen
